## 1.3 Environmental Conditions & Safety

### 1) Please avoid the following hostile conditions

- Temperatures below or exceeding:  
-10° C ~ 40° C (14° F ~ 104° F)
- Excessive vibration
- Wind or fans functioning in direct contact with weighing platform.
- Direct sunlight
- High humidity
- Ungrounded electrical outlet
- Unstable or flimsy surface
- Shared electrical outlet
- Dust or dirt
- Poor ventilation

### 2) Environmental Protection

The scale should be installed in a dry and liquid free environment. When the scale is installed in a high humidity or wet-type environment, be sure to avoid spilling or spraying directly on any surface of the scale.

### 3) Personal Safety

It is very important to be aware of personal safety whenever maintaining or operating this equipment. We have tried to place warning labels and other indicators at the actual location on the equipment where the danger is most likely to occur. Warnings and cautions that are necessary for the safe operation of the scale are contained in this manual. Please, make sure to read carefully ALL warnings and cautions before operating the scale.

### 4) Observe the following safety precautions

- Shut the scale **OFF** and unplug the scale whenever you are changing the label roll or whenever working in the printer bay.
- The outlet that the scale is plugged into, should be properly grounded.
- Whenever connecting or disconnecting **ANY** cables from the scale, be sure to hold the cables by the end connector. Failure to do so may cause a short circuit.
- Maintain a static-free work area.
- The outlet used must have the proper voltage ratings.

## 1.4 Leveling and Footer Location

### 1) Location

This scale must be placed on a flat and stable surface. Please keep the scale away from the direct path of oscillating fans, ventilation systems, or strong drafts as these air disturbances can be picked-up by the scale's very sensitive weighing platform and may cause incorrect weight readings.

#### 1.1) General Footer

Factory setting (Footer location is following picture)

#### 1.2) Short Case Footer

Unscrow the footer and place in center hole for narrow place.

## 2) Leveling

If the scale is not properly leveled, please adjust the 4 adjustable legs at the bottom of the scale. Turn the legs clockwise or counterclockwise so as to center the bubble of the leveling gauge inside the indicated circle. Turning the adjustable legs counter-clockwise (viewed from top of scale) will lower that part of the scale. Turning the adjustable legs clockwise (viewed from top of scale) will raise that part of the scale. (See Fig.)

## 1.5 Power Outlet and Requirements

Power Source : AC 100~240V, 50/60Hz, 1.5A

Power consumption : Max 90W

CL5000's outlet is on bottom of scale.

- 1) The CL5000 is designed to be used almost anywhere in the world! Like the many appliances of today, the CL5000 is designed with an automatically switching power supply. This allows operation when connected to an AC source from 100V to 240V at 50/60Hz with 5% tolerance.

NOTE: Please make sure that the power lines used for the CL5000 are dedicated lines with  
No high-noise devices (such as compressors, motors, etc) running on it.  
Also, make sure that the wiring to the electrical socket is correct.  
If you are uncertain as to the state of your work' electrical lines,  
please contact a certified electrician.

- 2) Once you are sure as to the safety of the electrical line, make sure to ONLY plug the scale into a 3-prong outlet. The third prong is a safety ground and an electrician should properly wire this if it is not correct or if you are unsure. Failure to this CAN result in electrical shock from use of this or any electronic scale.
- 3) Do not use any 3-prong to 2-prong adapters or break-off the third prong from the CLP power cord. The third prong is necessary and must be properly connected.
- 4) If you have any problems or questions regarding this matter, make sure to contact the CAS Service Department.

### ☐ Init-Zero range

Before Sales mode you need to compare Calibrated A/D value and current A/D value need to be in the safe range order to function property. Scale will not function if there is a weight or any distortion on the tray.

### ☐ Re-zero Range (%)

During the usage, zero range might be unstable cause by tray and other condition. You can set the allowance percent (%) range for zero display. (OIML regulation restricts 2% of maximum weight range can be used)

### ☐ Tare Range

You can set the maximum weights of tare up to 5.9kg  
(OIML regulation restriction is 6kg tare limits)

#### ④ Overload Range(d)

You can set the maximum overload range. For example, [9] set as 15.045g (5g×[9]=45g). If the weight is over 15.045 overload message will appear.

#### ⑤ Accumulation(Y/N)

You can set Tare weights additively. This is useful additional package is used for different goods.

#### ⑥ Subtraction(Y/N)

You can set Tare only if the other tare weight is less then the first value.

#### ⑦ Gross Zero Mark(Y/N)

The real weight value is 0(Gross Weight=0) display will indicate "▼" on the gross weight

NOTE: \* Gross weight is display will display total weight. (Tare setting does not effect)

\* Net weight is remain value of Tare weight.

\* If Tare setting is set as "N" the gross weight and net weight value is same.

#### ⑧ Net Zero Mark(Y/N)

When Tare weight is set to zero, Zero mark will display. In other words Net Weight is zero.

#### ⑨ Gross Zero-Tracking(Y/N)

You can set Zero-tracking while Gross Zero is 0. Factory setting is "Y".

#### ⑩ Net Zero-Tracking(Y/N)

You can set Zero-tracking while Net zero is 0. Factory setting is "N".
